Project idea:

Develop an Elder Scrolls-themed 3D dungeon crawler built using fixed-function PyOpenGL. The player controls an adventurer navigating a dangerous multi-level crypt to recover the legendary Elder Scroll of Aetherius, defending themselves against Draugr and Dwemer automatons while avoiding traps.

1. Player & Combat Mechanics
Three Stat Pools: Health (Red), Sanity (Blue), Stamina (Green).
Melee Combat (Stamina): Swing an iron sword (rotating cylinder) with Left Click.
Magic Combat (Sanity): Shoot firebolt spells (red/yellow glowing spheres) with the mouse wheel or a key.
Shield Blocking (Stamina): Raise a shield (flat cuboid) using Right Click to block incoming attacks.
Dragon Break: Whenever sanity is greater than a particular number if the player dies they respawn at the exact place without respawning enemies. If not, they restart. The required sanity increases over time. Sanity can be increased by drinking magicka potions found in chests.

2. Environment & Puzzle Mechanics
Pressure Plates: Stone slabs that open gates when stepped on.
Loot Chests: Chests that open when interacted with, spawning Magicka potions.
Gate Lock system: Doors that require matching claws.
Multi-floor Crypt: A three-floor progression (sewer -> crypt -> Scroll Chamber).

3. Enemy AI & Boss: 3 types of enemies including 1 boss.
Immersive Gameplay: Have at least 2 ways to deal with enemies other than direct combat. Human bandits and the undead are the enemies. The boss is an undead leach. The player can find alternate routes bypassing the enemies or try using charisma or traits to not fight enemies.

Hazard Systems
Swinging Blades: Double-sided blades swinging periodically on a hinge cylinder.
Spike Traps: Pressure-sensitive floor slots that thrust metal spikes upward.
Fire Traps: Wall carvings that breathe flames periodically.
Food: Arbitrary amount that goes down over time. No way to replenish must finish before it hits zero. Can find alternate sources. Such as cannibalizing enemies. But this has negative effects on the player. Such as random chance of taking health or stamina damage over time or permanent decrease. Definite detriment to sanity. May also gain negative passive.
Sanity: Lower sanity leads to hallucinations or fear of going into certain areas or fighting certain enemies if the player character has great difficulty fighting them.
D20: Have a d20 roll on top of skill checks.

4. Camera & UI Systems
Tank control View: Renders weapons and shield like old RE games..

Map Overlay: 2D map showing room layouts and player dot.
Classic Console Cheats: Toggle TGM (God Mode) or TCL (No-clip flight through walls).
Story: Game opens with a cinematic.
Character creation: The player can create their own characters.
